Omnis Studio Licensing

Why Changes in Studio Licensing?

Why Changes in Omnis Studio Licensing?

Targets & Benefits

- **Faster innovation**
Constant flow of new features, enhancements, fixes
- **Increased efficiency**
Dynamic updating of licenses without re-deployment
- **Less admin**
No more processing, administration and handling of thousands of serial numbers
- **Better planning**
By activation statistics; gives early warnings of activation use allowing you to scale licenses
- **More control**
Of all your licenses; detailed information of who is using your applications

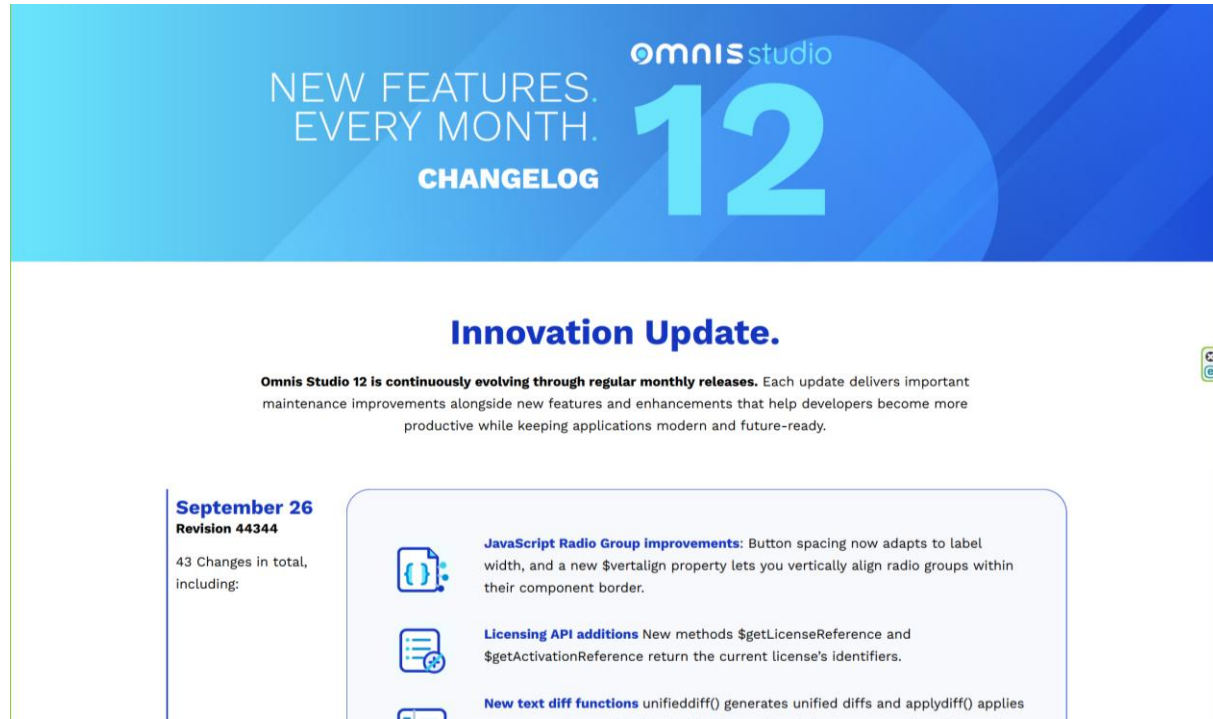

How Does The Omnis Studio Licensing Work In Practice

- Omnis Studio is [continuously updated](#) with [new releases each month](#)
- There won't be a v12.1, v12.2 nor v13 etc.
- Serial keys replaced old style serial numbers
- Studio 12 will be provided in a [subscription](#) model which [includes maintenance](#)
- In certain cases where subscription of deployment licenses is not possible, [lifetime licenses with mandatory maintenance](#) are available
- Individual requirements can be accommodated; please contact Omnis Sales

Omnis Website Updates

New Changelog Page

[https://www.omnis.net/
platform/omnis-
studio/changelog/](https://www.omnis.net/platform/omnis-studio/changelog/)

The screenshot shows the Omnis Studio 12 Changelog page. The header features the text "NEW FEATURES. EVERY MONTH. CHANGELOG" and a large "12" with the "omnisstudio" logo. Below this is the "Innovation Update." section, which states that Omnis Studio 12 is continuously evolving through regular monthly releases. The main content area lists updates for September 26, Revision 44344, including 43 changes in total. The updates are categorized into JavaScript Radio Group improvements, Licensing API additions, and New text diff functions.

CHANGELOG **12**

Innovation Update.

Omnis Studio 12 is continuously evolving through regular monthly releases. Each update delivers important maintenance improvements alongside new features and enhancements that help developers become more productive while keeping applications modern and future-ready.

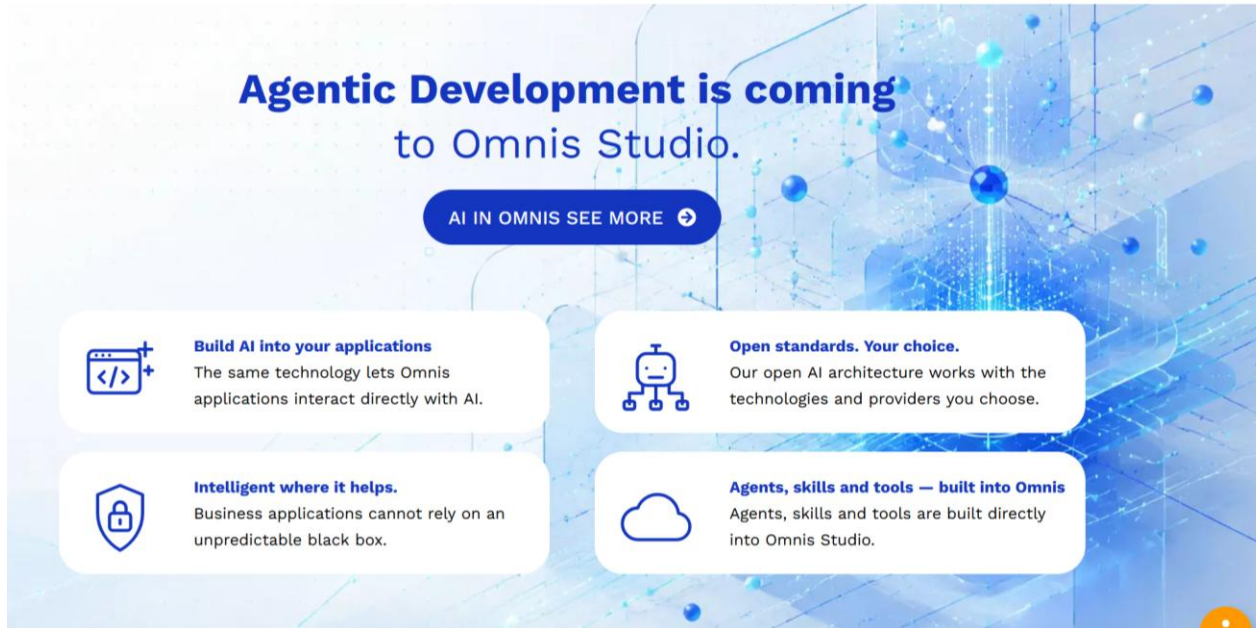

September 26
Revision 44344

43 Changes in total, including:

- JavaScript Radio Group improvements:** Button spacing now adapts to label width, and a new `$verticalalign` property lets you vertically align radio groups within their component border.
- Licensing API additions** New methods `$getLicenseReference` and `$getActivationReference` return the current license's identifiers.
- New text diff functions** `unifieddiff()` generates unified diffs and `applydiff()` applies

Announcement of AI Integration

Agentic Development is coming
to Omnis Studio.

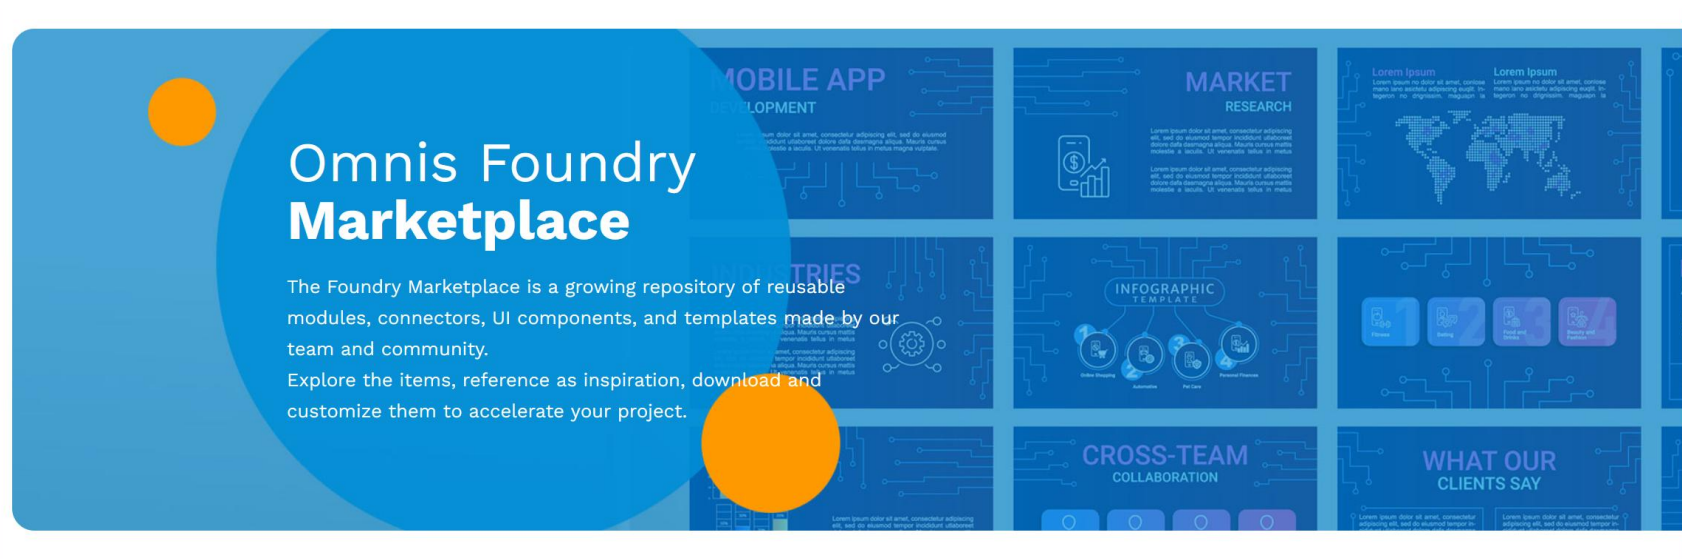

AI IN OMNIS SEE MORE →

- **Build AI into your applications**
The same technology lets Omnis applications interact directly with AI.
- **Open standards. Your choice.**
Our open AI architecture works with the technologies and providers you choose.
- **Intelligent where it helps.**
Business applications cannot rely on an unpredictable black box.
- **Agents, skills and tools — built into Omnis**
Agents, skills and tools are built directly into Omnis Studio.

Omnis Foundry Marketplace

<https://www.omnis.net/store/foundry/>

A shared ecosystem for accelerating Omnis development

Omnis Foundry Marketplace

Why use the Foundry?

- + **Faster Development**
Reuse instead of rebuild
Shorter project timelines
- + **Better Solutions**
Proven components
Learn from other developers
- + **Innovation**
Modern UI patterns
AI integrations etc.

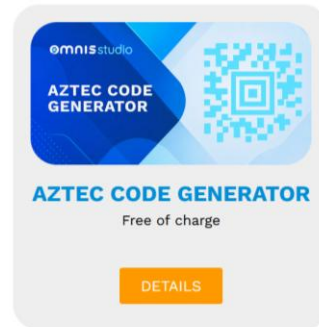

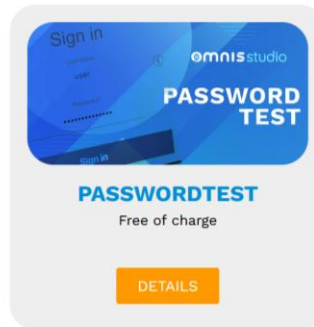

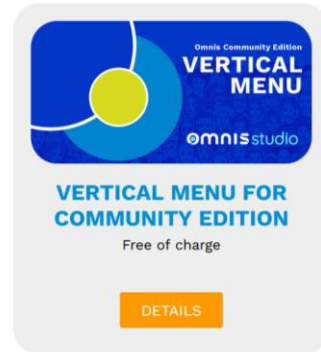

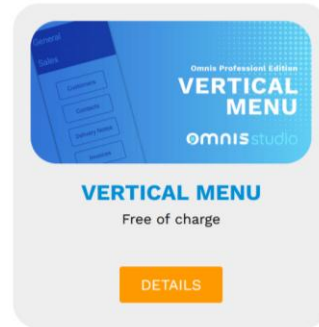

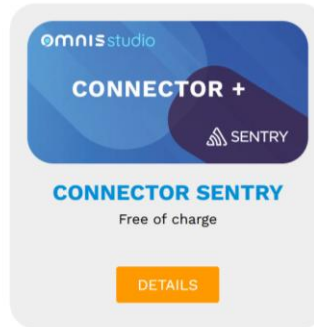

Why contribute to the Foundry?

- + **Gain visibility**
Show your expertise to the Omnis community
- + **Strengthen the Omnis ecosystem**
Grow the platform for everyone
Help new developers to get started
- + **Generate business opportunities**
Commercial add-ons
Consulting opportunities

Omnis Foundry Marketplace

What's On There?

Sample

OSentry is a REST API connector from Omnis Studio to Sentry, linking Omnis applications with professional error monitoring. Errors, warnings, and relevant runtime events are transmitted directly from Omnis to Sentry, where they are evaluated in a structured way. This makes problems visible before they have to be painstakingly reconstructed through support. The adapter collects important information from Omnis, prepares it for Sentry, and helps developers understand, prioritise, and fix errors more quickly.

Sentry is a platform for error monitoring and application monitoring. It captures errors from applications, groups similar incidents, shows affected environments, and provides context about the cause. This turns a simple error message into a comprehensible report with technical and functional insights.

Features

- Direct connection of Omnis to Sentry via DSN
- Capturing of exceptions, messages, logs, and SQL errors
- Support for severity levels such as fatal, error, warning, info, and debug

Connector Sentry

Omnis Foundry Marketplace

Omnis & Community Together

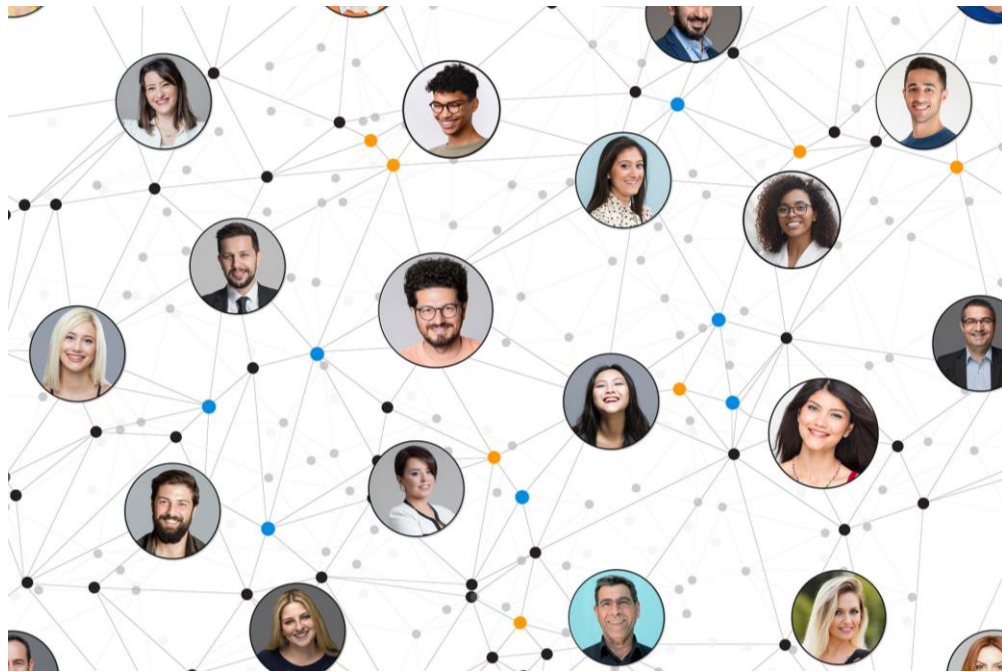

It will be successful if it will be driven by the Omnis Community.

> We provide visibility, infrastructure, processing
You provide your smart components and solutions

Started with free of charge components, chargeable offers will be added soon

All items hosted on our server,
downloadable directly from our website
Every 'provider' will be notified
automatically about each download

> Please submit your contributions and ask your questions to
birgit.jaeger@omnis.net

Enhancements of Community Forum

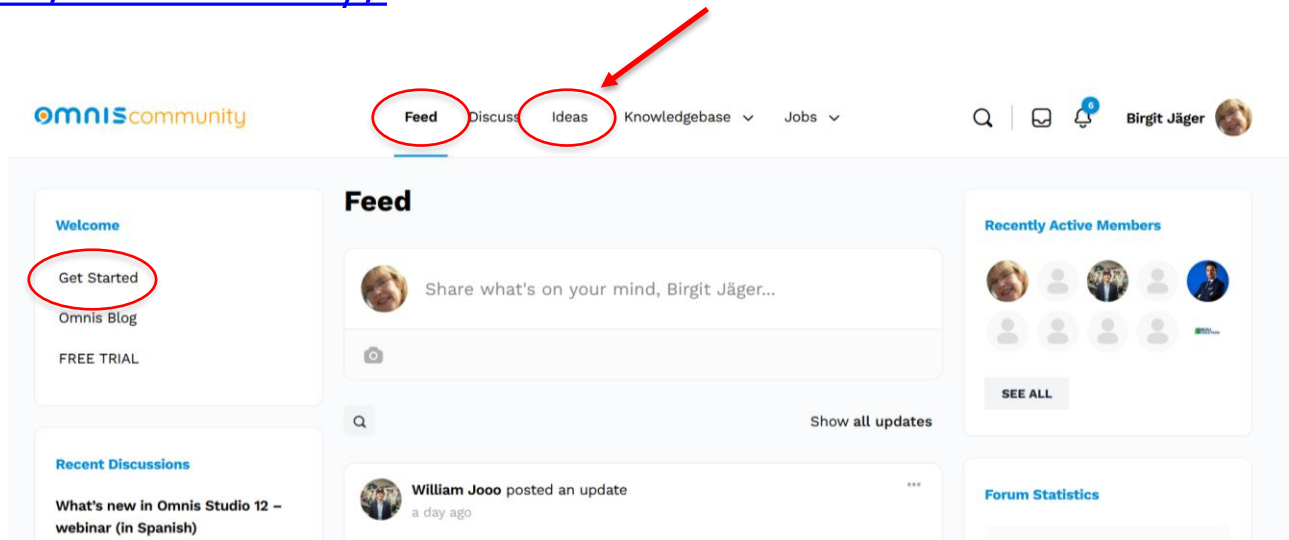

<https://www.omnis.net/community/>

Renamed the
Omnis Forum to
Omnis Community

Faster access: opens
in the Feed

Added a 'Get Started'
Document

New Community moderator: Tamino tamino.jaeger@omnis.net

Enhancements of Community Forum

Individual Notification Settings

In your Account Settings you can now define whether, how and for which items to receive notifications:

- Mentions
- Posts
- Activity feeds
- Social groups
- Discussion forums
- Private messages
- Member connections

The screenshot shows the Omnis Community website interface. At the top, the navigation bar includes the Omnis Community logo, links for Feed, Discuss, Ideas, Knowledgebase, and Jobs, along with search, mail, and notification icons, and a user profile for Birgit Jäger. The main content area is titled 'Account Settings' and features a sidebar with options: Login Information, Notification Settings (highlighted in blue), Privacy, Group Invites, Export Data, and Delete Account. The 'Notification Settings' section is active, showing 'Preferences' and 'Subscriptions' tabs. It instructs users to 'Choose which notifications to receive across all your devices.' There are two main notification channels: 'Email' (a notification sent to your inbox) and 'Web' (a notification in the corner of your screen). Both channels have checkboxes for 'Enable Notifications', which are currently checked. Below this, there are two notification categories: 'MENTIONS' and 'POSTS'. For 'MENTIONS', the notification is 'A member mentions you using "@Birgit"' and both Email and Web notification checkboxes are checked. For 'POSTS', the notification is 'A member replies to your post comment' and both Email and Web notification checkboxes are also checked.
